

# Compost Boost

## Makes Composting Easy

**Compost Boost** rapidly increases the natural decomposition and composting process significantly increasing the performance of your compost bin.

**Compost Boost** assists in maintaining effective composting processes even when you do not strictly control nitrogen to carbon balances in your compost. This makes composting a much easier process where you can dispose of all your organic waste material.

With **Compost Boost**, you are using the most powerful live enzyme technology available to rapidly digest waste matter in your composting unit.

More importantly though, you are accelerating nature by boosting the process through the addition of natural enzymes that already exist in the composting process.

When used regularly **Compost Boost** is the easiest and most cost effective way to remove odors, discourage pests and rodents, and increase composting performance.

*A helpful tip is to place your compost bin in a sunny location as the heat assists with the biochemical composting process.*

## Instructions for Use

1. Insert 1 filter bag in 1 pint or 500 ml of water. If compost is moist use 1/2 pint or 250 ml. Increase water as required to ensure good dispersion.
2. Mix well, allow 10 minutes for activation.
3. Disperse solution evenly across compost and throw in filter bag. Turn compost to mix thoroughly.
4. Repeat monthly or as required. Make sure unused filter bags are kept dry to prevent activating the enzymes.

## Applications

- Garden waste
- Kitchen waste

## Benefits of Use

- Easy application, ideal as a compost starter
- Odors are reduced
- Fast acting, 100% organic and biodegradable
- Easier to maintain nitrogen / carbon balances to ensure complete composting in minimum time
- Compost food waste (including meat, dairy etc) to minimize landfill
- Reduces compounds that attract insects and rodents
- Suitable for composting toilets
- Assist in nutrient take up of plants
- Harmless to humans and the environment when used as directed
- Provides high quality composting in shortest time possible

## Packaging

- 6 x single use packets contained in a sealed box
- Clip strip mountable
- Shelf mountable tear-away display box of 25

---

## Commercial Composting

For commercial composting, please ask about **BiOWiSH™ - Odor** which can assist commercial composting facilities by improving throughput, reducing costs and environmental emissions associated with composting of all types of organic matter including bio-solids, sorted municipal waste and green waste.

### What to expect

**BiOWiSH™ - Odor** begins working immediately upon application. Odor reduction will occur within minutes. Increases in speed of up to 6 times have been observed with actual results determined by the type of waste and environmental conditions.

**BiOWiSH™ - Odor** can be used solely for odor control by surface spraying to windrows. For optimum performance and odor control whilst turning follow directions for compost acceleration.

### What else can we do?

**BiOWiSH™ - Odor** is a bio-chemical product and as such composting rates will still vary depending on environmental conditions so measures to maintain heat in cold climates such as covers and tunnels will assist in minimizing composting time. Supplementary aeration will also still be beneficial.

## More Information

For more information on this or any of the revolutionary products based on the BiOWiSH™ technology, please visit [www.biowishtechnologies.com](http://www.biowishtechnologies.com)
